

A. Direct Optical Excitation
(Latency < 8 ms, Rel = 0.88)

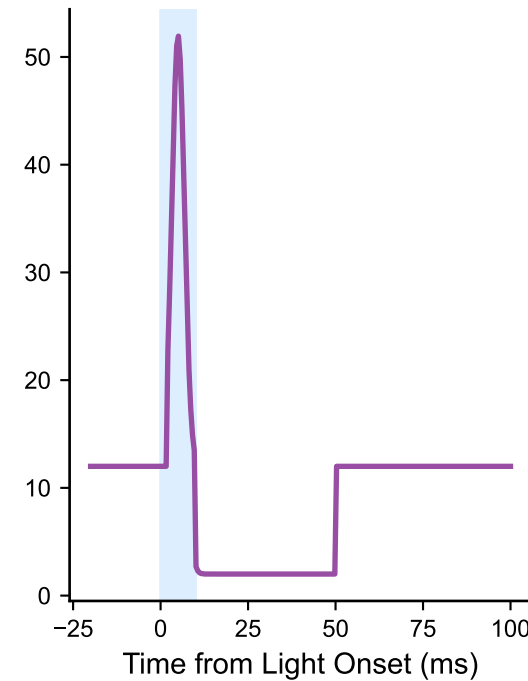

B. Delayed Network Excitation
(Onset = 11.2 ms, Rel = 0.42)

C. Profound Network Suppression
(Inhibition W3/W4: 85%)

D. Excitation → Suppression
(Direct Burst → Circuit Silence)

E. 10-Hz Train Adaptation
(Pulse n / Pulse 1 Response)
