

Scatter plot showing the distribution of normalized firing rates for Pvalb, Sst, and Vip neurons. The y-axis represents the normalized firing rate, and the x-axis shows the three neuron types. Pvalb neurons (blue) show a wide distribution with a mean line. Sst neurons (orange) show a more clustered distribution with a mean line. Vip neurons (green) show a very tight cluster with a mean line.

Figure 2 is a scatter plot showing the fraction of units with significant responses for three neuron types: Pvalb, Sst, and Vip. The y-axis is labeled 'fraction of units' and ranges from 0.1 to 0.5. The x-axis categories are Pvalb, Sst, and Vip. For each category, individual data points are plotted as circles, and a horizontal black bar indicates the mean. Pvalb (blue) has a mean of approximately 0.27. Sst (orange) has a mean of approximately 0.24. Vip (green) has a mean of approximately 0.15.

Neuron Type	Fraction of Units (Mean ± SEM)
Pvalb	0.27 ± 0.01
Sst	0.24 ± 0.01
Vip	0.15 ± 0.01

A scatter plot showing the fraction of units for three neuron types: Pvalb (blue), Sst (orange), and Vip (green). The y-axis is labeled 'fraction of units' and ranges from 0.1 to 0.6. Each neuron type has a horizontal black line indicating the mean. Pvalb has a mean of approximately 0.33, Sst has a mean of approximately 0.29, and Vip has a mean of approximately 0.18.

Neuron Type	Fraction of Units (approximate values)	Mean (approximate)
Pvalb	0.19, 0.20, 0.31, 0.36, 0.41, 0.42, 0.47	0.33
Sst	0.06, 0.13, 0.19, 0.20, 0.20, 0.33, 0.37, 0.42, 0.47, 0.62	0.29
Vip	0.12, 0.13, 0.14, 0.20, 0.21, 0.26	0.18
